NEW PATIENT CONSULTATION/EXAM

DIGITAL PHOTOGRAPHY

Right, center and left retracted views.

Lips together, repose, and full smile.

Occlusal views and full face portrait.

THE CONSULTATION APPOINTMENT

What do we discuss at the consultation appointment?

- Patient's desires and expectations
- Specific issues or concerns
- Short and long term prognosis

I will also show the patient a similar case that I have treated in the past on my iPad.

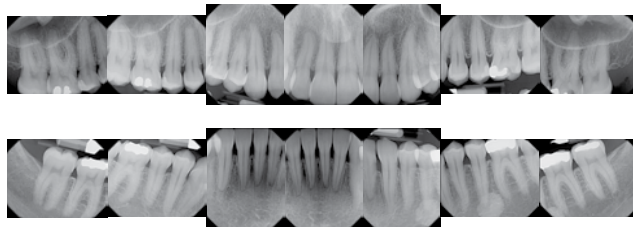

The goal of the first appointment is to gather pertinent patient information in order to treatment plan the case. Reappoint patient in one week and do not discuss the treatment plan or any fees. The goal of the initial consultation is to listen to the patient's desires, collect the data, and to show them my experience and my teams competence. I want the patient to leave my office saying **WOW!**

NEW PATIENT CONSULTATION/EXAM

After the patient leaves and when time permits, sit down with the patient's clinical data, models, photographs, x-rays, and develop a diagnosis and treatment plan(s). Discuss laboratory fees with your technician as well as case sequencing. For complex cases, models will need to be articulated and wax-up(s)/mock-up(s) performed. Only then can you develop a sound treatment plan with the appropriate fee.

Diagnostic wax-up
(depending on case type)
